PROFESSIONAL SUMMARY

B.Sc. Networking (Cloud Computing) undergraduate with hands-on experience engineering production-style AWS cloud infrastructure, custom Kubernetes scheduling plugins, and 100% Terraform-codified deployments. Proven track record developing Go-based scheduler plugins on AWS EKS, architecting autonomous event-driven SOAR security pipelines, and deploying serverless analytics platforms. Strong foundation in Linux system administration, CIDR networking, and automated CI/CD workflows; targeting Cloud Infrastructure, DevOps, and SRE roles.

TECHNICAL SKILLS

Cloud Platforms: AWS (EKS, EC2, VPC, S3, IAM, CloudWatch, ALB, Auto Scaling, Lambda, API Gateway, DynamoDB, SQS, KMS, EventBridge)

Infrastructure as Code & CI/CD: Terraform (Modules, State Locking), Docker, Kubernetes, Helm v3, GitHub Actions, Linux Systemd

Networking & Security: TCP/IP, DNS, CIDR/Subnetting, Route Tables, NAT, Security Groups, NACLs, IAM Least-Privilege, SEC WORM S3

Linux & Observability: Linux (Ubuntu/Debian), Bash Scripting, Prometheus, Grafana (5 Dashboards), AWS CLI, Git, System Diagnostics

Programming Languages: Python, Bash Shell, Go (Plugin Development)

FEATURED CLOUD & DEVOPS PROJECTS

KubeForecast – Kubernetes Predictive Scheduling & FinOps Engine github.com/ShyamD2/KubeForecast

Technologies: Kubernetes (AWS EKS v1.31), Terraform, Go 1.23, Helm v3, Docker, Prometheus, Grafana, GitHub Actions

- Codified multi-AZ AWS infrastructure with modular Terraform (VPC, EKS v1.31, IAM IRSA, ECR, S3); deployed microservices via enterprise Helm v3 charts and automated a 4-stage CI/CD pipeline in GitHub Actions.
- Developed a native Kubernetes Go scheduler framework plugin evaluating node placement in 90.35 ns to steer workloads onto safe waterline nodes and eliminate structural cloud compute waste.
- Validated 50.0%–66.7% node fleet reduction in live AWS EKS soak tests, deploying 5 Grafana dashboards with Prometheus telemetry.

Project AEGIS – Autonomous AWS Cloud Security & SOAR Fabric github.com/ShyamD2/aegis-cloud-security

Technologies: AWS (IAM, KMS, EventBridge, Step Functions, DynamoDB, S3 WORM), Terraform, Python, Checkov, Trivy

- Codified 100% of multi-account AWS security infrastructure via modular Terraform with zero manual console configuration, enforcing state locking, strict blast-radius boundary tagging, and least-privilege KMS/IAM policies.
- Engineered autonomous SOAR containment pipelines using EventBridge, Step Functions, and Lambda to detect threats, isolate compromised resources, and stream tamper-evident forensic audit trails into SEC Rule 17a-4 S3 WORM vaults.
- Integrated automated DevSecOps guardrails in GitHub Actions with Checkov, TFLint, and Trivy, achieving 110 passing test suites.

AWS Serverless Platform & Real-Time Analytics Engine

github.com/ShyamD2/aws-cloud-serverless-url-shortener

shortener

Technologies: AWS (API Gateway, Lambda, DynamoDB, SQS, S3, CloudFront, Athena, CloudWatch), Terraform, Python

- Architected an event-driven serverless system with API Gateway and Lambda delivering sub-30ms redirects at zero idle compute cost.
- Decoupled analytics ingestion using Amazon SQS dead-letter queues to stream partitioned JSONL clickstream data into Amazon S3, enabling serverless SQL queries via Amazon Athena and real-time operational monitoring via CloudWatch alarms.
- Declaratively provisioned all cloud networking, compute, and storage infrastructure using HashiCorp Terraform and GitHub Actions.

EDUCATION

Bachelor of Science in Networking (Cloud Computing)

2024 – May 2027

Subbalakshmi Lakshmipathy College of Science, Madurai

GPA: 8.4 / 10.0

Relevant Coursework: Computer Networks, Routing & Switching, Cloud Virtualization, Linux Administration, Network Security

CERTIFICATIONS & PRACTICAL TRAINING

- **AWS Academy Graduate – AWS Academy Cloud Foundations** – AWS Training & Certification
- **Linux 100 & Programming 100 Fundamentals** – TCM Security (Practical Linux administration, permissions, Bash automation)
- **Cloud Computing with Web Development Intern** – Reccsar Pvt. Ltd. (April 2026)
