SHYAM KUMAR D

Cloud & DevOps Engineer | AWS • Kubernetes • Terraform • Linux

Bengaluru, Karnataka • Mobile: +91 7010672248 • shyamcloud021@gmail.com

linkedin.com/in/shyam-kumar-d • github.com/ShyamD2 • shyamd2-portfolio.netlify.app

PROFESSIONAL SUMMARY

Cloud & DevOps Engineer specializing in AWS, Kubernetes (EKS), Terraform IaC, and Go programming. Engineered native Go Kubernetes scheduler plugins (66% node reduction), multi-source GitOps drift reconciliation engines, and event-driven AWS serverless pipelines with FinOps and Prometheus/Grafana observability. Proficient in Linux internals, TCP/IP networking, and automated CI/CD quality gates. **Available for 6-Month Industrial Internship or Engineering roles starting Nov 16, 2026 in Bengaluru (College NOC Secured; Immediate Joiner).**

TECHNICAL SKILLS

Cloud Platforms: AWS (EKS, EC2, VPC, S3, IAM, CloudWatch, ALB, Auto Scaling, Lambda, API Gateway, DynamoDB, SQS, KMS, EventBridge)
DevOps & IaC: Terraform (Modules, Remote State, State Locking), Docker, Kubernetes, Helm v3, GitHub Actions, Git, AWS CLI, CI/CD, GitOps
Networking & Security: TCP/IP, DNS, CIDR/Subnetting, Route Tables, NAT, Security Groups, NACLs, IAM Least-Privilege, KMS, S3 Security
Linux & Observability: Linux (Ubuntu/Debian), Bash Scripting, Systemd, Prometheus, Grafana, CloudWatch Logs/Alarms, System Diagnostics
Programming Languages: Go, Python, Bash Shell

FEATURED CLOUD & DEVOPS PROJECTS

KubeForecast – Kubernetes Predictive Scheduling & FinOps Engine *github.com/ShyamD2/KubeForecast*
Technologies: Kubernetes (AWS EKS v1.31), Terraform, Go 1.23, Helm v3, Docker, Prometheus, Grafana, GitHub Actions

- Engineered a native Kubernetes Scheduling Framework plugin in Go with a predictive waterline algorithm to consolidate workloads and expose empty nodes for safe cluster scale-down.
- Provisioned multi-AZ AWS EKS infrastructure using modular Terraform (VPC, EKS, IAM IRSA, ECR, S3); packaged components with Helm v3 and automated validation, testing, and container builds through GitHub Actions.
- Validated 50.0%–66.7% worker-node reduction during live AWS EKS soak testing while maintaining PDB-safe scheduling; implemented Prometheus telemetry and 5 Grafana dashboards for reliability and FinOps observability.

DriftWarden – AWS Infrastructure Drift Detection & GitOps Engine *github.com/ShyamD2/driftwarden*
Technologies: Go, AWS, Terraform, GitOps, Docker, GitHub Actions, CIS, JUnit

- Built a three-source drift engine correlating Git desired configuration, Terraform state, and live AWS resources to detect configuration drift, shadow resources, and unapplied infrastructure changes.
- Implemented AWS multi-account discovery, CIS security checks, FinOps cost-bleed analysis, consistency re-probes, and lock-aware Terraform state auditing to reduce false-positive operational alerts.
- Automated CI/CD quality gates with JSON/JUnit evidence, Docker packaging, safe dry-run remediation, and Terraform 1.5+ GitOps import generation for reproducible infrastructure recovery.

AWS Serverless Platform & Real-Time Analytics Engine *github.com/ShyamD2/aws-serverless*
Technologies: AWS (API Gateway, Lambda, DynamoDB, SQS, SNS, S3, CloudFront, Athena, CloudWatch), Terraform, Python, Docker

- Architected an event-driven AWS platform using API Gateway, Lambda, and DynamoDB for low-latency URL redirection with asynchronous telemetry isolated from the request path.
- Implemented SQS/SNS messaging, dead-letter queues, structured logging, correlation IDs, S3 analytics storage, and Athena diagnostics to improve fault isolation and operational visibility.
- Provisioned 10 modular Terraform components with remote state and DynamoDB locking; automated testing, security validation, Docker-based local testing, deployment, and CloudWatch monitoring through GitHub Actions.

EDUCATION

Bachelor of Science in Networking (Cloud Computing) *2024 – May 2027*
Subbalakshmi Lakshmipathy College of Science, Madurai **GPA: 8.4 / 10.0**
Relevant Coursework: Computer Networks, Cloud Virtualization, Linux Administration, Network Security

PRACTICAL EXPERIENCE & CERTIFICATIONS

- **Cloud Computing Intern** – Reccsar Pvt. Ltd. *April 2026 – May 2026*
  Configured cloud environments, managed Linux server instances, and assisted in CI/CD pipeline deployments.
- **AWS Academy Graduate – AWS Academy Cloud Foundations** – AWS Training & Certification
- **Linux 100 & Programming 100 Fundamentals** – TCM Security (Linux administration, permissions, Bash automation)
